Q2. English (5 marks)

Technology have changed the way we learn in a big way. Now students can find information easily on internet, youtube videos, google etc. Before this student have to go library and read big books but now everything is on phone.

I think technology make learning better because student can learn at there own pace and explore different topic which interest them. For example a student can watch video on youtube to understand hard topic.

But sometime student became too dependent on technology and they dont try to think on their own, they just search google for answer.

In conclusion technology is good for learning but student should use it correctly.
