Question 2 — Technology in Education Essay

Student: Sneha Kapoor · Roll: 15B · Subject: English

2.5 / 5

Evaluated

100% confidence

I think technology has made learning easier for students. Now students can find information
on the internet quickly instead of going to the library. For example, students can watch
videos to learn new things. This is helpful because it saves time. Overall technology is
useful for students and helps them study better.

Rubric Breakdown

Score: 2.5 / 5

- **States a clear, unambiguous position on the essay prompt**

1/1

The student clearly states their position that technology makes learning easier and better for students.
- **[1] Provides well-structured arguments supported by relevant concrete examples**

0.5/1

The student provides a basic argument about easier information access and a relevant example (watching videos). However, the arguments are not well-structured or developed in detail, and only one side of the prompt's core discussion is addressed.
- **Meaningfully considers and addresses an opposing viewpoint**

0/1

The student does not consider or address any opposing viewpoints, which was a specific requirement of the prompt.
- **[2] Uses relevant examples and demonstrates reasoning rather than merely making unsupported claims**

0.5/1

The student provides a relevant example and some basic reasoning (saving time). However, the reasoning could be more developed and explore the 'how' and 'why' in greater detail.
- **[3] Concludes with a coherent, logical synthesis of the presented arguments**

0.5/1

The student provides a concluding statement, but it is a simple restatement of their initial position rather than a coherent synthesis of developed arguments. More detailed arguments would allow for a stronger synthesis.

Model Answer — Reference

Not graded — provided as the marking-scheme reference for this question.

Technology has significantly changed the way students learn because information that was once difficult to access is now available within seconds. Students can use educational websites, digital libraries, videos and interactive tools to understand concepts that they may not have understood in a classroom. Technology can therefore make learning more flexible and allow students to explore topics according to their own interests and pace. For example, a student struggling with a difficult scientific concept can watch several different explanations until they find one that they understand.??However, having easy access to information can also create a problem. Students may become dependent on searching for an answer instead of trying to solve a problem themselves. If a student immediately looks up the solution to every difficult question, they may complete their work but fail to develop their own reasoning and problem-solving abilities. There is also a risk that students may accept inaccurate information simply because it appears online.??In my opinion, technology does not automatically make students better or worse learners. Its effect depends on how it is used. Technology is most useful when students use it to understand concepts, explore different ideas and check their own work rather than simply copying answers. Therefore, technology should be treated as a tool that supports thinking, not as a replacement for thinking.
