Name- Raghav Rathī

In my opinion technology has made learning Significantly better for students. Information that used to take hour to find in a library is now available within seconds through search engine on line Courses and educational videos. This means Students can explore topics at their own pace and revisit material as many times as they need until they truly understand it. for example as student who struggles with a difficult chemistry concept can watch several different explanation on Youtube until one of them finally makes sense.

However, some people argue that this access makes students lazier thinkers since they can simply look up an answer instead of working through a problem themselves. This is a fair concern and is true that overreliance on searching for answer can weaken a student skills.

Even so I believe benefits outweigh this risk as long as technology is used thoughtfully. A student who uses the internet to understand a concept more deeply rather than to copy a finished answer, ends up learning more. Technology should be treated as a tool not a replacement.

In my opinion technology has made learning significantly better for students. Information that used to take hours to find in a library is now available within seconds through search engine online courses and educational videos. This means students can explore topics at their own pace and revisit material as many times as they need until they truly understand it. For example a student who struggles with a difficult chemistry concept can watch several different explanations on Youtube until one of them finally makes sense.

However, some people argue that this access makes students lazier thinkers since they can simply look up an answer instead of working through a problem themselves. This is a fair concern and it is true that overreliance on searching for answers can weaken a student's skills.

Even so I believe benefits outweigh this risk as long as technology is used thoughtfully. A student who uses the internet to understand a concept more deeply rather than to copy a finished answer, ends up learning more. Technology should be treated as a tool not a replacement.

Rubric Breakdown

Score: 5 / 5

- **States a clear, unambiguous position on the essay prompt** 1/1
The student clearly states their position that technology has made learning significantly better for students.
- **Provides well-structured arguments supported by relevant concrete examples** 1/1
The student provides a well-structured argument about self-paced learning and supports it with a concrete example of using YouTube for chemistry concepts.
- **Meaningfully considers and addresses an opposing viewpoint** 1/1
The student acknowledges the opposing viewpoint that technology can make students lazier thinkers and addresses it by agreeing that overreliance can weaken skills, but then counters with the idea of thoughtful use.
- **Uses relevant examples and demonstrates reasoning rather than merely making unsupported claims** 1/1
The student uses relevant examples (YouTube for chemistry) and demonstrates reasoning by explaining how technology facilitates deeper understanding when used thoughtfully, rather than just for copying answers.
- **Concludes with a coherent, logical synthesis of the presented arguments** 1/1
The student concludes with a logical synthesis, reiterating that the benefits outweigh the risks when technology is used thoughtfully as a tool for deeper understanding, not as a replacement for critical thinking.

Model Answer — Reference

Not graded — provided as the marking-scheme reference for this question.

Technology has significantly changed the way students learn because information that was once difficult to access is now available within seconds. Students can use educational websites, digital libraries, videos and interactive tools to understand concepts that they may not have understood in a classroom. Technology can therefore make learning more flexible and allow students to explore topics according to their own interests and pace. For example, a student struggling with a difficult scientific concept can watch several different explanations until they find one that they understand. However, having easy access to information can also create a problem. Students may become dependent on searching for an answer instead of trying to solve a problem themselves. If a student immediately looks up the solution to every difficult question, they may complete their work but fail to develop their own reasoning and problem-solving abilities. There is also a risk that students may accept inaccurate information simply because it appears online. In my opinion, technology does not automatically make students better or worse learners. Its effect depends on how it is used. Technology is most useful when students use it to understand concepts, explore different ideas and check their own work rather than simply copying answers. Therefore, technology should be treated as a tool that supports thinking, not as a replacement for thinking.
